

Refer to touch screen controller shown on the left:

1. Status **1** showing the states of the actuated lift and VMS position. Below is the different states
 - ◆ Raised—the VMS up
 - ◆ Lowered—the VMS down
 - ◆ Rising—the VMS is moving up
 - ◆ Lowering—the VMS is moving down
 - ◆ Sense Err—the sensor are failing to detect the position of the VMS after driving for 30 seconds.
2. Button **2** is the Raise button, when its color is green -the VMS is moving up. Press again to pause the movement. Once the sensor has detected the VMS is fully up, the movement will stop.
3. Button **3** is the Lower button, when its color is green-the VMS is moving down. Press again to pause the movement. Once the sensor has detected the VMS is fully down, the movement will stop.
