

Heavy duty cone truck design & build

**Well designed and manufactured,
our cone truck solutions are
seriously strong yet light weight.**

Our heavy duty aluminium cone truck solutions can be designed to suit your specific needs or you can choose from our wide range of plans to fit both standard and low body trucks. With built in features to support safety and operational requirements, additional accessories can also be added to suit your requirements.

Designed for safe cone deployment in live traffic, vehicles are equipped with sliding certified safety rail harness anchor systems and removable safety rails.

Tray floors are engineer certified and load rated with SWL rating of 980 kg per pallet space.

Each vehicle is equipped with our in-house VMS and Arrow Boards and can be customised completely to your needs.

Increased payload

Long term durability

Completely customisable

Built in safety features

Quality Australian manufacturing.

Our manufacturing facilities are closely embedded into the local and regional supply chain and ecosystem. Arrowes sources as many components, parts and supplies as possible from our Queensland and Australian suppliers. We support the local business community and ensure our close connections benefit our clients in terms of response times, quality and service.
